Project Title : Big Data Analytics For Business Insight

Team ID : SIC-25-26-Team410

Date : 16-Feb-2026

1. INTRODUCTION & OBJECTIVE

**** The primary goal of this project is to analyze product sales data to identify key business trends.***

**** We aim to provide insights into sales distribution and product performance using data science tools.***

2. TOOLS & TECHNOLOGY USED

**** Python : For data manipulation and analysis.***

**** Google Colab : As the primary environment for running Python scripts.***

**** GitHub : For version control and project documentation.***

**** Pandas & Seaborn :For data cleaning and visualization.***

3. DATA ANALYSIS PROCESS

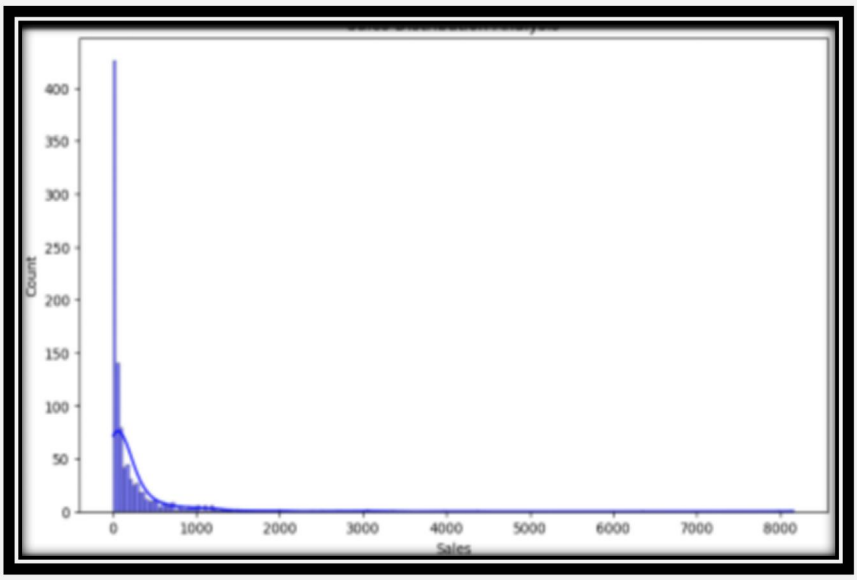
**** Data Acquisition : The dataset file.csv was uploaded to the data/ folder.***

**** Data Cleaning : We verified the data for missing (null) values using code. The dataset was found to be of high quality with no significant errors.***

**** Exploratory Data Analysis (EDA) : Performed statistical checks and visualized trends.***

4. VISUAL INSIGHTS (GRAPHS)

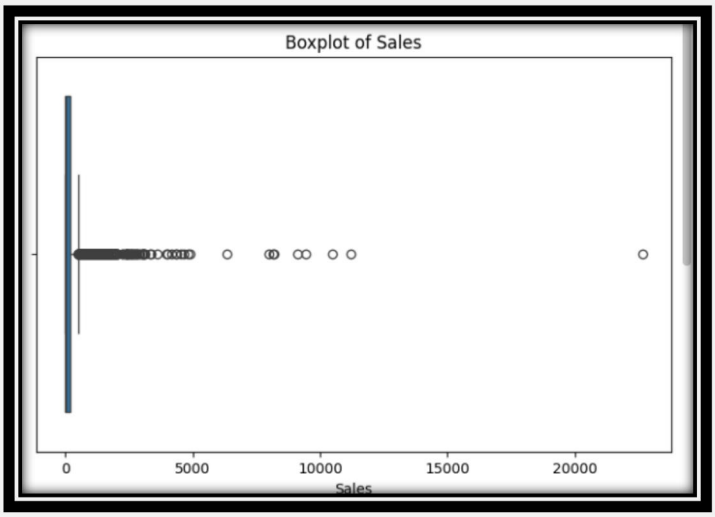
<<<<<<<<<<<<<<<<<<<<<<>>>><<



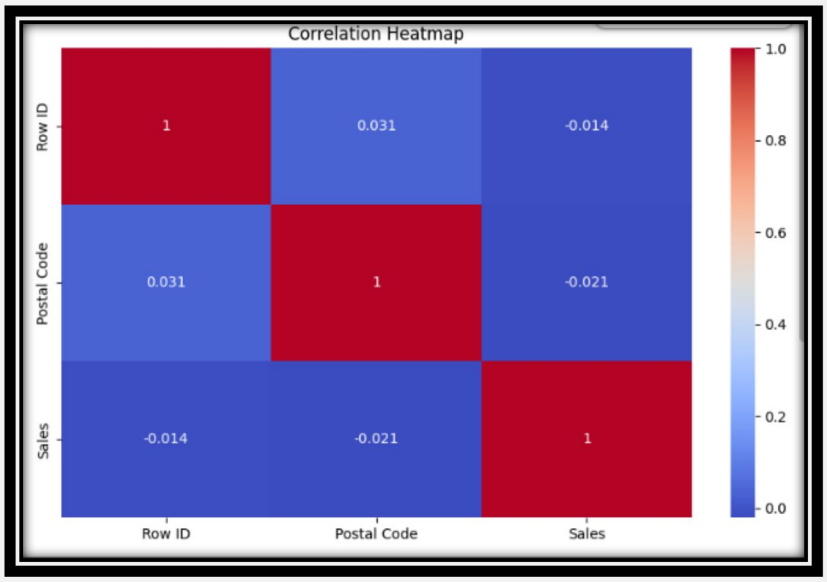
➢ **SALES DISTRIBUTION**

The chart above represents the distribution of sales across different categories.

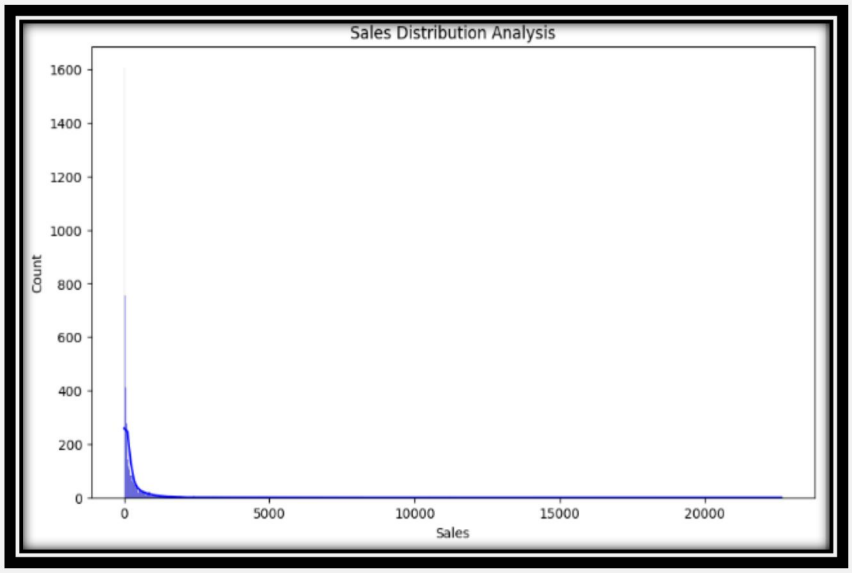
**** It helps identify which products are generating the most revenue.***



➢ **BOX PLOT OF SALES**



➢ ***CORRELATION HEATMAP***



➢ ***SALES DISTRIBUTION ANALYSIS***

5. CONCLUSION: **** The project successfully demonstrates how Big Data tools can be used to gain business insights from raw data.***
